Responsible Conduct of Research
Involving Humans
Wednesdays, 4:00 – 5:50 p.m. on Zoom

This ten-week course relates the ethical principles underlying science to the regulations involved in proposing, designing, executing, reporting and reviewing research.

The principal objectives are 1) to prepare scientists and others to recognize and address the ethical dilemmas that inevitably arise in relation to human research throughout their careers and 2) to foster effective and ethical performance of research through knowledge and utilization of regulations and available support systems.
